

SECTION 17. WASTEWATER DISPOSAL 17-1

SECTION 17. WASTEWATER DISPOSAL

The proposed Northeast Reliability Interconnect (NRI) will not require subsurface wastewater disposal for continued operation and maintenance activities. The project involves the construction and operation of an electric transmission line and modifications to an existing substation in Orrington which do not require permanent subsurface wastewater disposal facilities. Sewage or other wastes will not be produced on-site during operation and maintenance of the proposed project.

Bangor Hydro-Electric Company (BHE) or its contractors will place temporary chemical toilets at the staging areas to provide for wastewater disposal needs during the construction phase of the project.
